Browse Networks in the Matlab Command Window Using surfNet

Author(s): Siu Hung Joshua Chan, Department of Chemical Engineering, The Pennsylvania State University

Reviewer(s):

INTRODUCTION

In this tutorial, we will demonstrate how to browse a COBRA model in verbal format in the Matlab command window through an initial call and interactive mouse clicking.

MATERIALS

EQUIPMENT SETUP

Start CobraToolbox

```
% initCobraToolbox;
```

```
     _____   _____   _____   _____      _____      |

```

PROCEDURE

Load the *E. coli* iJO1366 model as an example model.

```
load('iJO1366.mat')
```

Browse a network

Browse the network by starting from an initial metabolite, e.g., D-glucose in the extracellular compartment.

```
surfNet(iJO1366, 'glc__D_e')
```

```
Met #1195  glc__D_e, D-Glucose, C6H12O6
Consuming reactions:
  #164  EX_glc__D_e, Bd: -10 / 1000, D-Glucose exchange
  glc__D_e <=>
  #1355  GLCtex_copy1, Bd: -1000 / 1000, Glucose transport via diffusion (extracellular to periplasm)
  glc__D_e <=> glc__D_p
  #1356  GLCtex_copy2, Bd: 0 / 1000, Glucose transport via diffusion (extracellular to periplasm)
  glc__D_e -> glc__D_p
Producing reactions: none

Show previous steps...
```

All reactions producing or consuming '**glc__D_e**' will have their reaction indices (#xxx), ids (.rxns), bounds (.lb/.ub), names (.rxnNames) and formulae printed on the command window. All reactions and the participating metabolites are hyperlinked. For example, **click** on the reaction '**GLCtex_copy1**'. (This is equivalent to run the following command.)

```
% called by clicking 'GLCtex_copy1'
surfNet([], 'GLCtex_copy1', 0, 'none', 0, 1, [], 0)
```

```
Rxn #1355  GLCtex_copy1, Bd: -1000 / 1000, Glucose transport via diffusion (extracellular to periplasm)
glc__D_e <=> glc__D_p
  id     Met       Stoich     metNames, metFormulas
Reactant:
 #1195   glc__D_e  -1         D-Glucose, C6H12O6
Product:
 #1587   glc__D_p  1          D-Glucose, C6H12O6

Show previous steps...
```

Details for the metabolites will appear, e.g., indeices, ids, stoichiometric coefficients, names and chemical formulae. By iteratively clicking on the reactions and metabolites that you are interested in, you can browse through the metabolic network.

Now, say you have gone through a series of metabolites and reactions (glc__D_e, GLCtex_copy1, glc__D_p, GLCptspp, g6p_c):

Click glc__D_p:

```
% called by clicking 'glc__D_p'
surfNet([], 'glc__D_p', 0, 'none', 0, 1, [], 0)
```

```
Met #1587  glc__D_p, D-Glucose, C6H12O6
Consuming reactions:
  #1336  GLCDpp, Bd: 0 / 1000, Glucose dehydrogenase (ubiquinone-8 as acceptor) (periplasm)
  q8_c + glc__D_p + h2o_p -> q8h2_c + glcn_p + h_p
  #1352  GLCabcpp, Bd: 0 / 1000, D-glucose transport via ABC system (periplasm)
  atp_c + h2o_c + glc__D_p -> adp_c + glc__D_c + h_c + pi_c
  #1353  GLCptspp, Bd: 0 / 1000, D-glucose transport via PEP:Pyr PTS (periplasm)
  pep_c + glc__D_p -> g6p_c + pyr_c
  #1354  GLCt2pp, Bd: 0 / 1000, D-glucose transport in via proton symport (periplasm)
  glc__D_p + h_p -> glc__D_c + h_c
Producing reactions:
  #1252  G1PPpp, Bd: 0 / 1000, Glucose-1-phosphatase
  g1p_p + h2o_p -> glc__D_p + pi_p
  #1355  GLCtex_copy1, Bd: -1000 / 1000, Glucose transport via diffusion (extracellular to periplasm)
  glc__D_e <=> glc__D_p
  #1356  GLCtex_copy2, Bd: 0 / 1000, Glucose transport via diffusion (extracellular to periplasm)
  glc__D_e -> glc__D_p
  #1607  LACZpp, Bd: 0 / 1000, B-galactosidase
  h2o_p + lcts_p -> gal_p + glc__D_p
  #2463  TREHpp, Bd: 0 / 1000, Alpha,alpha-trehalase (periplasm)
  h2o_p + tre_p -> 2 glc__D_p

Show previous steps...
```

Click GLCptspp:

```
% called by clicking 'GLCptspp'
surfNet([], 'GLCptspp', 0, 'none', 0, 1, [], 0)
```

```
Rxn #1353  GLCptspp, Bd: 0 / 1000, D-glucose transport via PEP:Pyr PTS (periplasm)
pep_c + glc__D_p -> g6p_c + pyr_c
  id     Met       Stoich     metNames, metFormulas
Reactant:
 #784       pep_c  -1         Phosphoenolpyruvate, C3H2O6P
 #1587   glc__D_p  -1         D-Glucose, C6H12O6
Product:
 #508       g6p_c  1          D-Glucose 6-phosphate, C6H11O9P
 #853       pyr_c  1          Pyruvate, C3H3O3
```

```
Show previous steps...
```

Click g6p_c:

```
% called by clicking 'g6p_c'
surfNet([], 'g6p_c', 0, 'none', 0, 1, [], 0)
```

```
Met #508  g6p_c, D-Glucose 6-phosphate, C6H11O9P
Consuming reactions:
  #1283  G6PDH2r, Bd: -1000 / 1000, Glucose 6-phosphate dehydrogenase
  g6p_c + nadp_c <=> 6pgl_c + h_c + nadph_c
  #1284  G6PP, Bd: 0 / 1000, Glucose-6-phosphate phosphatase
  g6p_c + h2o_c -> glc__D_c + pi_c
  #2077  PGI, Bd: -1000 / 1000, Glucose-6-phosphate isomerase
  g6p_c <=> f6p_c
  #2461  TRE6PS, Bd: 0 / 1000, Alpha,alpha-trehalose-phosphate synthase (UDP-forming)
  g6p_c + udpg_c -> h_c + tre6p_c + udp_c
Producing reactions:
  #477  AB6PGH, Bd: 0 / 1000, Arbutin 6-phosphate glucohydrolase
  arbt6p_c + h2o_c -> g6p_c + hqn_c
  #1214  FFSD, Bd: 0 / 1000, Beta-fructofuranosidase
  h2o_c + suc6p_c -> fru_c + g6p_c
  #1231  FRULYSDG, Bd: -1000 / 1000, Fructoselysine phosphate deglycase
  frulysp_c + h2o_c <=> g6p_c + lys__L_c
  #1285  G6Pt6_2pp, Bd: 0 / 1000, Glucose-6-phosphate transport via phosphate antiport (periplasm)
  2 pi_c + g6p_p -> g6p_c + 2 pi_p
  #1353  GLCptspp, Bd: 0 / 1000, D-glucose transport via PEP:Pyr PTS (periplasm)
  pep_c + glc__D_p -> g6p_c + pyr_c
  #1500  HEX1, Bd: 0 / 1000, Hexokinase (D-glucose:ATP)
  atp_c + glc__D_c -> adp_c + g6p_c + h_c
  #2082  PGMT, Bd: -1000 / 1000, Phosphoglucomutase
  g1p_c <=> g6p_c
  #2459  TRE6PH, Bd: 0 / 1000, Trehalose-6-phosphate hydrolase
  h2o_c + tre6p_c -> g6p_c + glc__D_c

Show previous steps...
```

In each click, there is also a button '**Show previous steps...**' at the bottom. Clicking on it will show the metabolites and reactions that you have visited in order. This is equivalent to calling:

```
% called by clicking 'Show previous steps...'
surfNet([], [], 0, 'none', 0, 1, [], 0, struct('showPrev', true))
```

```
glc__D_e>>GLCtex_copy1>>glc__D_p>>GLCptspp>>g6p_c>>
```

You can go back to any of the intermediate metabolites/reactions by clicking the hyperlinked `mets/rxns` shown.

Call options

Shown below are various call options for including flux vectors and customizing display. All call options are preserved during the interactive browsing by mouse clicking.

Show objective reactions

Omit the '`metrxn`' (2nd) argument to print objective reactions:

```
surfNet(iJO1366)
```

```

Show metabolite names in reaction formulae

Some models may use generic ids for `mets/rxns`. In this case, call `surfNet()` with the '`metNameFlag`' (3rd) arguement turned on to show the names for metabolites (`.metNames`) in the reaction formulae, e.g.,

```
surfNet(iJO1366, 'fgam_c', 1)
```

```
Met #484  fgam_c, N2-Formyl-N1-(5-phospho-D-ribosyl)glycinamide, C8H13N2O9P
Consuming reactions:
  #2207  PRFGS, Bd: 0 / 1000, Phosphoribosylformylglycinamidine synthase
  ATP + N2-Formyl-N1-(5-phospho-D-ribosyl)glycinamide + L-Glutamine + H2O -> ADP + 2-(Formamido)-N1-(5-p
  + L-Glutamate + H+ + Phosphate
Producing reactions:
  #1316  GARFT, Bd: -1000 / 1000, Phosphoribosylglycinamide formyltransferase
  10-Formyltetrahydrofolate + N1-(5-Phospho-D-ribosyl)glycinamide <=> N2-Formyl-N1-(5-phospho-D-ribosyl)
  + 5,6,7,8-Tetrahydrofolate
  #1317  GART, Bd: 0 / 1000, GAR transformylase-T
  ATP + Formate + N1-(5-Phospho-D-ribosyl)glycinamide -> ADP + N2-Formyl-N1-(5-phospho-D-ribosyl)glycina
```

```
Show previous steps...
```

Hide reaction detials

Turn off the '`showMets`' (6th) arguement to suppress details for reactions, e.g.,

```
surfNet(iJO1366, iJO1366.rxns(1001:1010), [], [], [], 0)
```

Look at one or more flux distributions

First, get a flux distribution by optimizing the biomass production of the model (the standard flux balance analysis[1]). Then call surfNet with the flux distribution (4th argument) to look at how the flux through pyruvate is distributed:

```
s = optimizeCbModel(iJO1366, 'max', 'one');
surfNet(iJO1366, 'pyr_c', [], s.x)
```

```
Met #853  pyr_c, Pyruvate, C3H3O3
Consuming reactions with non-zero fluxes :

Show previous steps...
```

All reactions involving pyruvate with non-zero fluxes are printed. The flux values are in the parentheses following the reaction ids. Note that reactions stated as consuming or producing the metabolite have taken the directions of the fluxes into account. Therefore, supplying a different flux distribution or not supplying may give different display. By default, only reactions with non-zero fluxes are printed if a flux distribution is supplied. Turn the '`nonzeroFluxFlag`' (5th) argument off to show all reactions:

```
surfNet(iJO1366, 'pyr_c', [], s.x, 0)
```

```
Met #853  pyr_c, Pyruvate, C3H3O3

Customize model data to be displayed

Customize the fields for metabolites and reactions to be printed by supplying the '`field2print`' (7th) argument. It is defaulted to be:

`{{'metNames','metFormulas'}, {'rxnNames','lb','ub'}}`

The first cell contains the metabolite-related fields to be printed and the second cell contains the reaction-related fields to be printed. It can also be inputted as a single cell array of strings, as long as from the size (equal to `#mets` or `#rxns`) or from the name of the field (starting with '`met`' or '`rxn`'), the fields are recognizable to be met- or rxn-related. For example, show the `grRules` for rxns but omit the bounds and show the constraint sense (`csense`) associated with each metabolite. Note the difference from the original call:

```
surfNet(iJO1366, 'fdp_c', [], [], [], [],...
```

```
Met #473  fdp_c, D-Fructose 1,6-bisphosphate, C6H10O12P2, csense: E
